

CCTV Mobile Application

Product Specification Clarifications & Business Logic Questionnaire

PROJECT NAME:	CCTV Mobile Application	DATE:	August 2026
DOCUMENT PURPOSE:	Product Specification & Architecture Alignment	PREPARED FOR:	Client Review & Feedback
AUTHOR ENTITY:	UrbanSync Innovations, LLC	TARGET APPS:	Mobile App & Admin Portal

Executive Summary

This document outlines the legal, compliance, and architectural requirements for the **CCTV Mobile Application** (Community Court Television), alongside operational, business logic, and backend workflow questions identified through direct codebase analysis and client feature requests. The CCTV platform facilitates community dispute reporting, dual-party case posts, public voting/rating, ad manager monetization, and administrative moderation. To ensure precise database architecture, seamless state management, and full regulatory compliance, please review and confirm the decisions outlined below across all system modules.

Part 1: Requirements (Legal, Compliance & Policy Documents)

To launch and operate the CCTV platform legally and securely across the Apple App Store and Google Play Store, the following official policy documents and legal frameworks must be finalized and embedded directly into the mobile application (under lib/feature/profile/pages/terms_and_policies.dart) and backend web management portals.

1. Terms & Conditions (T&C;)

- **User Accounts & Eligibility:** Rules governing user account registration, identity verification, legal age requirements (18+), and profile accuracy for standard users, accused parties/defendants, and platform admins.
- **Platform Role & Liability Disclaimer:** Explicit statement that CCTV acts as a community reporting and public dispute transparency platform, outlining liability disclaimers for user-generated case media and community voting outcomes.
- **Conduct & Acceptable Use:** Strict rules against harassment, defamation, false reporting, malicious case creation, spam, and non-consensual media distribution.

2. Privacy Policy

- **Data Collection & Usage:** Disclosure of user personal data collected (name, email, phone, location metadata, uploaded case media, evidence descriptions, voting choices, and device metadata).
- **Third-Party Services:** Transparent disclosure of integrated infrastructure including Firebase (Auth, Firestore, Cloud Storage, Messaging), payment gateways (Stripe / In-App Purchases), and AI content moderation / classification engines.

- **Data Retention & Deletion:** Clear instructions for users on how to request profile deletion, data export, media removal, and compliance with privacy regulations (GDPR / CCPA).

3. Terms of Service (ToS)

- **Case Creation & Posting Agreement:** Binding agreement terms governing case initiation, tagging opposing parties/defendants, evidence attachment, and community voting participation.
- **Moderation & Account Enforcement:** Platform rights to review, flag, or remove non-compliant cases, remove fraudulent evidence, or suspend abusive user accounts.
- **Monetization & Advertising Terms:** Rules governing promoted posts, featured case placements, and ad manager campaign management.

4. Copyright & Media Content Policy (DMCA / Fair Use)

- **User Submissions & Media License Grant:** Non-exclusive license granted by users when submitting case media (videos, photos, evidence documents) to CCTV for public display and community review.
- **Takedown Request Mechanism:** Formal DMCA takedown request procedure and copyright infringement reporting form for original media owners or depicted individuals.

5. Payment, Revenue Distribution & Monetization Policy

- **Platform Monetization & Ad Billing:** Breakdown of advertisement placement fees, boosted case promotion costs, and in-app subscription options.
- **Payment Distribution & Refund Terms:** Financial rules detailing how funds are processed via Stripe Connect / App Store billing, non-refundable feature promotions, and dispute fee allocations.

6. About Us & Company Overview Document

- **Store Submission & Compliance:** Official company biography (UrbanSync Innovations, LLC), mission statement, and platform overview required for Apple App Store and Google Play Store review and publication.
- **User & Community Transparency:** Informational content explaining the CCTV origin, community court voting mechanics, platform values, and safety guidelines.

Part 2: Questions & Operational Decisions

Question 1: Terms & Conditions Architecture (Global vs. Upload Rules)

Context: In the codebase (`profile_page.dart` & `terms_and_policies.dart`), global legal documents (EULA & Privacy Policy) exist under account settings. Furthermore, during case creation (`create_case_page.dart`) and defendant response (`case_response_page.dart` & `pending_case_response_page.dart`), users must check an inline consent checkbox (*'I accept the Terms and Conditions'*) prior to submitting media or initiating a case.

Questions for Client:

- **Global Sign-Up Terms:** What specific legal clauses (e.g., account responsibilities, privacy policy, community guidelines) should users accept during initial account registration?
- **Post-Specific Upload Guidelines:** Should post/case creation trigger a separate visual consent checkbox/notice covering media rights, non-offensive content acknowledgement, and community voting rules?
- **Enforcement Model:** Will users check off terms once during initial app signup, or must they confirm media ownership/guidelines prior to issuing every case post or response request?

Question 2: Standalone (Individual) Posts vs. Collaborative Comparison Posts

Context: The current workflow in `create_case_page.dart` initiates a 2-party comparison post by tagging a defendant/second party, placing the post into a pending state. We need architectural clarification regarding standalone, single-author posts.

Questions for Client:

- **Individual Post Support:** Can users publish standalone single-author posts/cases without tagging or inviting a collaborator/defendant?
- **Individual Post Behavior:** If individual posts are supported, how does public engagement work? Can viewers vote/rate an individual post, or is voting strictly reserved for 1-vs-1 comparison posts?
- **Fallback / Open Challenges:** If a user wants to post a comparison case without tagging a specific individual, can they create an 'Open Challenge' post where any public user can accept and respond?

Question 3: Collaboration Request Lifecycle & State Management

Context: In `pending_case.dart` and `pending_page.dart`, a pending case post remains unpublished while awaiting the tagged user's media response. Defining these states is critical for database queries, push notifications, and feed indexes.

Questions for Client:

- **Request Expiration:** How long does a tagged user/defendant have to accept and contribute their media response (e.g., 24 hours, 48 hours, 7 days) before the pending request expires?
- **Declined / Ignored Requests:** What happens if the tagged user declines or fails to respond? Should the initiator's case convert to a standard individual post, return to draft mode, or auto-delete?
- **Preview & Visibility:** Are pending case requests visible anywhere publicly in a 'Waiting for Response' feed state, or are they strictly private notifications sent to the tagged recipient?

Question 4: Ad Creation, User Request & In-App Ad Payment Workflow

Context: The app currently integrates Google AdMob banners and custom Admin/Super Admin ad publishing tools (create_ad_page.dart & super_admin_ads_page.dart). However, there is no workflow allowing standard app users or advertisers to request an ad placement, submit creative assets, select duration packages, or complete payments to the Admin.

Questions for Client:

- **Ad Request Submission Channel:** How should external users/advertisers request an ad placement from the Admin? Should we build an in-app 'Request Ad Placement' submission form, or will ad requests take place outside the app (e.g., advertiser web portal / direct admin contact)?
- **Admin Review & Approval Workflow:** What workflow should occur when a user submits an ad request? Should incoming ad proposals appear in an 'Ad Requests' queue in the Admin dashboard for approval, modification, or rejection before going live?
- **Ad Pricing & Payment Mechanics:** How will payments work when a user requests an ad? Should advertisers pay upfront inside the app (via Stripe / In-App Purchase) based on impression/click packages or placement duration (e.g., \$50/week), or will invoicing and payment settlement be managed manually by the admin?
- **Advertiser Campaign Metrics:** Should users/advertisers who purchase an ad have access to a dedicated 'My Ads' dashboard in the app to view real-time impression counts, click-through rates, and active campaign durations?

Question 5: Payment Model, Fee Distribution & Revenue Breakdown

Context: In create_ad_page.dart, ad_profile_page.dart, and administrative monetization settings, provisions exist for boosted posts, promoted case placements, and ad campaign management.

Questions for Client:

- **Platform Fee Percentage:** What exact percentage (or fixed fee) will CCTV apply to promoted posts, ad campaigns, or monetized features?
- **Payment Gateway Selection:** Should featured profile/post upgrades and custom ad campaigns be billed via Apple In-App Purchase / Google Play Billing on mobile, or via Stripe Web Checkout?
- **Financial Settlement & Refunds:** How should ad cancellation refund requests be processed, and should resolving an ad dispute automatically trigger refund APIs?

Question 6: Target Geographic Regions & International Rollout Scope

Context: Defining target geographical boundaries impacts payment currency configuration, phone authentication rules, legal compliance, and cloud hosting infrastructure.

Questions for Client:

- **Operational Countries:** In which country or countries is the CCTV app intended to launch and operate (e.g., United States only, North America, or Global)?
- **Multi-Currency Support:** Should the app support multiple currencies (USD, CAD, EUR, GBP) or strictly operate in a single currency (USD)?
- **Phone & Identity Verification:** Are phone verification and identity checks restricted to domestic phone formats or open internationally?

Complete Requirements & Questions Summary Table

Category	Item	Current Codebase Status	Action Required
Legal	Terms & Conditions (T&C;)	Generic EULA string in legal_documents.dart	Draft CCTV T&C; & integrate into sign-up & profile screens
Legal	Privacy Policy	Generic Privacy text string in legal_documents.dart	Draft comprehensive Privacy Policy & link in app
Legal	Terms of Service (ToS)	Missing dedicated ToS document	Draft ToS covering case posting & community voting rules
Legal	Copyright / DMCA Policy	Missing DMCA policy & form	Create DMCA policy & in-app content reporting modal
Legal	About Us & Overview	Missing official store text	Draft official company biography & store submission text
Workflow	Post Consent Enforcement	Checkbox present on case create & response pages	Confirm whether global signup acceptance is sufficient
Workflow	Standalone Post Support	Case create forces tagging a defendant	Decide standalone post rules, voting mechanics & open challenges
Workflow	Collaboration Lifecycle	Pending state wired in Firestore models	Define expiration timeout, auto-delete, and draft fallback logic
Monetization	User Ad Request Workflow	Admin can create custom ads; no user request UI	Build user ad submission form, admin approval queue & ad payment setup
Monetization	Pricing & Revenue Split	Ad Manager & Admin Ads screens built	Finalize platform commission %, pricing tiers & billing gateway
Scope	Target Regions & Currency	App configured for USD	Confirm operating countries, multi-currency & phone verification scope
